Rotaract Club of Xiamen University Malaysia | Rotary Club of Kuala Lumpur Dynamics | Rotary Club of Tun Razak Exchange

SDC Hackathon

Technical Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

SDC HACKATHON 2026

Technical & Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club
Submission Deadline: [Insert date]

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

1. Team & Project Overview

Team Name	FAA!
Project / Solution Name	"UN-HIRED" PROJECT
Name (Leader)	AHMAD IRFAN BIN HISHAMUDDIN
Email & Phone (Leader)	ahmadhshmddn@gmail.com / +60 12-853 4116
University Affiliation(s)	UNIVERSITI TEKNOLOGI MARA (UiTM)
Live Prototype URL	https://unhired.replit.app
Code Repository URL (public / access granted to judges)	https://github.com/ahmadirfn/Un-HiReD

2. Architecture & Technology Stack

2.1 System Architecture Overview

Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.

[Maximum 200 words]

Un-HiReD uses a lightweight, highly optimized architecture deployed entirely on Replit. The user interface is built with Next.js, which securely handles user state and uploaded CVs on the client side using IndexedDB and localStorage. When a user submits a profile, Next.js sends the data to our FastAPI Python backend.

The FastAPI backend processes the CV strictly in-memory without permanent database storage. It reads local market trends using Pandas from a static, internal dataset **job_trends.csv**. The backend then constructs an engineered prompt and makes a secure external call to the Groq API, leveraging the **gpt-oss-20b** model for rapid LLM inference.

Once Groq returns the parsed skills, gap analysis, and recommended learning pathways, FastAPI formats the response and returns it to the Next.js frontend for visualization. The entire full-stack system is hosted seamlessly on Replit's cloud infrastructure, ensuring low latency and zero external database dependencies.

2.2 Languages, Frameworks & Libraries

List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.

Name & Version	Purpose in Project	License
FastAPI	Backend web framework for routing API requests and processing logic	MIT License
Next.js	Frontend React framework for user interface and client-side routing	MIT License
Python	Primary backend programming language	PSF License
Pandas	Reading, parsing, and formatting the local (job_trends.csv) data	BSD 3-Clause License

3. APIs & Cloud Services

3.1 External APIs

List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.

API & Provider	Purpose in Project	Access Tier (free / paid / sponsor-provided)
Groq API (OpenAI-compatible)	Core LLM inference for resume parsing, job matching, and recommendation generation	Free tier

3.2 Cloud Platforms & Deployment

List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.

Service & Provider	Purpose in Project	Plan / Region
Replit	Full-stack hosting (Next.js frontend and FastAPI backend) and live demo deployment.	Free / Standard

4. AI Tools, Models & Datasets

4.1 AI Models Used in the Solution

List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.

Model & Version	Source / Provider	Usage (pre-trained / fine-tuned / self-trained)	License / Terms
openai/gpt-oss-20b	Groq	Pre-trained	Groq Terms of Service / Open-source weights

4.2 Datasets

List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
job _trends.csv (Market-trend data)	Local project data	Private / Self-collected	N/A (Internal)	N

4.3 AI-Assisted Development Tools

Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.

Did your team use any generative-AI tool to help create code, design, text, or other project material?

☑ Yes ☐ No

If yes, list them below:

Tool & Version	**Used For**	**Extent of Use (minor / moderate / major)**
Gemini	Architecture planning, UI/UX strategy, and prompt engineering	major
Codex	Code generation, repository structuring, and refactoring	major
Replit	Generating presentation slides, demo video, and visual design assets	moderate
Claude	Refining and polishing prompts prior to Replit AI generation	minor
ChatGPT	Reviewing, proofreading, and checking the content of project documentation	minor

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

[Maximum 100 words]

We used Gemini for architecture, Codex for coding, Claude for prompt refinement, ChatGPT for documentation review, and Replit AI for presentation media. All AI-generated code was reviewed line-by-line, tested locally and manually integrated to prevent vulnerabilities. We also manually verified all ChatGPT-reviewed documentation and Replit-generated media to ensure every statistic, claim and diagram strictly matched our actual codebase and validated external data sources.

5. Sponsor-Provided Resources

Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.

Did your project use any official SDC sponsor-provided resource?

☑ Yes ☐ No

If yes, list them below:

Sponsor	**Resource (API / credits / platform / data)**	**How It Was Used in the Project**
Replit	Cloud Platform & Deployment / Hosting Environment (.replit and deployment infrastructure)	Used to host the live full-stack application (Next.js frontend and FastAPI backend), configure environment secrets securely, and generate the mandatory live demo prototype URL (https://unhired.replit.app/) for judge evaluation and Proof of Use.

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

[Maximum 100 words]

Replit was absolutely essential to our project's success. Beyond providing zero-configuration cloud hosting for our live prototype so judges could evaluate the working application, we relied heavily on Replit to generate our presentation slides and demo video. Without Replit, we would have lacked both our production deployment infrastructure and the core visual assets required for our pitch.

6. Security, Privacy & Responsible Use

6.1 Data Handling & Privacy

What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.

[Maximum 150 words]

The backend processes uploaded CVs entirely in memory to execute prompt generation via the Groq API. It does not save any personal data or resumes to a server disk or backend database. To provide a seamless and secure user experience, data retention is strictly client-side: the frontend stores the uploaded resume file in the browser's IndexedDB, while extracted text, skills, and active dashboard sessions are temporarily held in localStorage and sessionStorage. Because no user data is stored on our servers, it is protected by the user's local browser security and can be instantly cleared by the user.

6.2 Known Limitations & Risks

Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.

[Maximum 150 words]

The primary limitation is dependency on a single LLM provider (Groq) for core inference. If the API experiences downtime or rate limits, the matching functionality will temporarily degrade. We mitigated this by implementing graceful error handling on the frontend. Additionally, generative models carry an inherent risk of hallucinating skills or job matches. We mitigated this risk by strictly grounding the AI prompts using the parsed CV text and validating recommendations against our deterministic local dataset **job_trends.csv**, minimizing creative liberties and ensuring matches remain objective and data-driven.

7. Compliance & Readiness Checklist

Tick all boxes that apply before submitting.

- ☑ All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.
- ☑ All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.
- ☑ No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.
- ☑ Any use of generative-AI tools for development has been disclosed and reviewed by the team.
- ☑ Any use of official SDC sponsor resources has been declared in Section 5.
- ☑ The prototype described here is accessible to judges through the links provided in Section 1.
- ☑ All fields in this template have been completed within the word limits stated.

8. Declaration

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team's knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.
